

CollectMax™

Advanced Collections Software

MaxConditions Module

The MaxConditions module allows you to create and store conditional statements that can be used in several areas of CollectMax to add additional custom selection criteria to your processes. Areas of CollectMax where MaxConditions can be used include Batch Processes, Action Completion Codes, Reports, the MaxUpdater module, and the Claim State Indicator.

Examples of conditional statements include status range, balance range, court county, type code, last action date, as well as other data fields and user defined variables. Only conditions evaluated as "True" will be included in any process that is run.

Conditional Documents are also included as part of MaxConditions. With Conditional Documents you can define a group of documents and add a condition statements to each document within the group. Documents will only be generated for those conditions that are evaluated as 'True' by the program. This takes out any human error in determining which documents should be processed depending on the particulars on the account.

The MaxConditions module requires CollectMax™ Version 8 and an annual support contract. Contact JST Sales for more details.

MaxConditions are included with the MaxPlans module. A future purchase of MaxPlans will include a discount for the purchase of MaxConditions.
